## Public Safety Redefined

Tech-enabled safety and reporting keeps your spaces safe:

- Accuracy rate of +/- .2 degrees fahrenheit.
- Pre-screen employees and guests, limit the entrance of symptomatic individuals, and alert management staff of temperature readings of 100.4 and higher.
- Minimal setup and intuitive interface with temperature information displayed on-screen and supports LED and Infrared Fill Light at night and in low-light environments.

Transportation

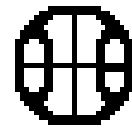

Education

Hospitality

Concerts

Sports Arenas

Healthcare

Keep your team informed and up to date on all current protocol:

- Push Notification to segmented audiences to get the right message to the right person at the right time.
- E-Learning keeps your team up to date on current procedures and tracks course completion and proves compliance.

# Meet Your All-In-One Solution

## Thermal Scan

Public safety has been redefined with FDA approved tech-enabled temperature analysis. Scan employees and guests with a simple, easy to use, integrated thermal camera system that is specifically engineered to read and report body temperatures with accuracy of +/- .2°F, better than the FDA approved uncertainty rates. Automated discrete alerts when the temp threshold of 100.4 has been triggered, as defined by FDA guidelines.

## No-Touch Temp

Maintain a safe environment and intelligently and accurately screen individual human temperatures at a short-range (1-5 feet) for the most accurate detection feedback. Avoid person-to-person contact and let the technology do the dirty work for you.

## Quick Read

It only takes a couple of seconds to accurately read a person's temperature, keeping traffic moving at the choke points to prevent overcrowding and upholding social distancing guidelines. Fast reads also allow for rapid response from management, reducing unwanted exposure.

## Validation

Verify and validate physical access through Visitor Management and Employee Scheduling to manage all interpersonal contact. With facial recognition access control integration, guests and employees can check-in or clock-in to ensure a safer experience.
